What are Acute Conditions?

Acute condition is a disease, illness or injury that is likely to respond quickly to treatment which aims to return the person to his or her state of health immediately before suffering the disease/illness/ injury which leads to full recovery.

These are the conditions that one suffers from every now and then and are unexpected like fever, cough, cold, injury, diarrhea etc. In these conditions, once treated for a few days you get better completely and the condition is 'cured'. No regular treatment, medicines, follow up, or monitoring is required for such conditions.

Policy Variants to Choose From
